INTERFIT – STELLAR XD DIGITAL FLASH WITH LCD CONTROL PANEL

Interfit, one of the leading manufacturers of photographic lighting is pleased to announce the arrival of the Stellar XD to compliment the new Stellar X range.

The new Stellar XD Flash heads will be available as single heads or part of highly specified kits.

The Stellar XD Flash is a new breed of flash aimed at the Professional Photographer. Designed from the ground up, Stellar XD carries many of the features complimentary to the Stellar X range. In addition the Stellar XD features an easy to read LCD control panel and push button controls, allowing each program to be easily set with the minimum of effort.

Stellar XD is able to independently control the Flash output in 1/10th increments over a 5 f stop range and also set the modelling lamp function independently as required. For simplicity, “Proportional mode” controls both of the above functions to the same degree of accuracy.

Auto Power dumping is a prime consideration to professional photographers. Naturally Stellar XD has this feature normally associated with higher valued products.

Wedding Photographers will appreciate the ability to be able to turn off the Sync cell when using Interfit INT412R Radio receivers plugged in to the heads. This will stop other photographers with compact cameras firing the heads allowing you to concentrate on getting the best images.

Available during July from Interfit Main Dealers starting at £199.99 Inc vat for a single 150 watt head, also available in 300 watt, 600watt and 1000 watt models.

Kits are also available in each of the power ranges starting with (INT451) 150 watt Twin umbrella kit for just £419.99 inc vat, up to a full 3 head kit (INT468) 600 watt with roller bag for easy transportation and additional accessories for just £1079.99 inc vat.

Further information will be available on the Interfit Website shortly.
