

ASSEMBLY INSTRUCTIONS

Parts:

- 4 Carbon steel rods (8 for Octobox)
- 1 Main body (Silver inside, black on outside)
- 1 Inner diffuser
- 1 Front diffuser
- Plus Speed ring of choice.

First check that the carbon rods are threaded through the loops on the inside edges of the main cover and also that one end of each rod is inside the pocket on each of the inside front corners of the cover.

Gently pull apart the Velcro strips on each of the rear corners of the main cover.

Then holding the speed ring in one hand, making sure that the lug's that fix the softbox to the light head are facing backwards away from the back of the softbox. Insert the rear end of each rod into the holes on the outer edge of the speed ring. Check the table below for the order in which the rods need to be inserted, using the holes quoted in the table for your softbox.

Once all the rods are in place the main body of the softbox should then be rigid. Close up the Velcro flaps at the back of the box and turn the box face up so that the diffusers can be fitted. First fix the inner diffuser using the press-stud fastenings on the ends of the elastic strips. The front diffuser is fixed into place using the Velcro strip on the diffusers edge.

To dismantle the softbox after use, place the softbox face downwards onto the floor and pull open the Velcro flaps on the rear end of the box. Holding each rod in turn press the speed ring downwards towards the inside of the box at the point where the rod is fixed into the ring. This allows you to pull the rod out of the speed ring. Repeat for each of the rods. The box can then be folded.
